LiveNX 23.2.1

RELEASE NOTES

Release Information

- Release Version: LiveNX v23.2.1
- Release Date - Jun 30, 2023
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

Server Version:	23.2.1-20230627-250b08b
Web Version:	23.2.1-20230627-a3724e4+b20

Resolved Customer Issues

- LS-3159 - Fixed an issue where non-WAN interfaces were included in the Interface Utilization Above Threshold Over Time Report report despite report parameters being specified to WAN interfaces only
- LS-3274, LS-3390 - Fixed an issue where some flex searches on report key fields were causing reports to not use the long term store
- LS-3426 - Fixed an issue where having many custom applications could result in out-of-memory events on the node
- LS-3441 - Improved report performance for many SD-WAN reports

Bug Fixes

General

- Fixed an issue where flows were being dropped due to there being too many file handles open

Dashboard

- Fixed an issue where != filters were turning into = when re-visiting the SD-WAN dashboard

Device Management

- Fixed an issue where non-selected interfaces would sometimes be displayed if a problem occurred while loading the device model

Flow Data Status

- Fixed an issue where the flow data status would not work if any managed device had an empty string for a device serial

Reporting

- Fixed an issue where interface descriptions were not available in the report creation modal
- Fixed an issue where no flex search was applied for the application drill-down of the "Application Performance Over Time" report
- Improved report performance for many SD-WAN reports

Stories

- Fixed an issue where an additional Live Wire column was present on the Flow Path Analysis story

Engineering Console

- Fixed an issue where non-selected interfaces would occasionally appear in the topology

Known Issues

- Devices with empty strings as device serials are poorly supported on the Operations Dashboard
