New Features and Enhancements

Entity Pages

- Site Entity page no longer has a geographical map view. This has been moved to the "Geo Topology" page
- Devices entity page load time has been reduced
- Select entity pages are now limited to 15 minute time ranges. Affected pages:
 - Sites
 - Devices
 - Interfaces

Stories

- Device Inventory story load time has been reduced

Geo Topology

- SD-Wan integration is no longer a requirement to use the geo topology
- First time users will always have a "Status: critical" filter applied
- Applications and SD-WAN Tunnels layers are turned off by default
- Time range options have been altered

Dashboard

- All availability widgets have been consolidated under an "Availability" section
- New availability widgets have been added
 - Total availability of sites, devices, interfaces
 - Site availability
 - Service provider availability

Reporting

- Performance improvements for device and interface availability reports
- Report rendering time has been reduced for some reports
- Email notification is sent without attachment if the file size exceeds mail server limit
- Provide ability to cancel all reports in queue

Resolved Customer Issues

- LD-20628: Unhandled error when copying policy from one router to another
- LD-22666: Interface Bandwidth Widget takes a large amount of time to run on the web
