Application Version

Server Version:	25.1.1-20250414-d7d9381
Web Version:	25.1.1-20250413-71c90f8+b14

- **Java Version:** 21.0.5
- **Ubuntu Version:** 22.04

Enhancements

General

- Added additional checks to Restart CH automatically

Topology

- Added ability to reduce unused subnets in logical topology (only include selected interfaces)

Reporting

- InfluxDB aggregation reports are now disabled by default

Onboarding

- Added vendor and models support for Oracle Acme Packet Devices.
- Added vendor support for HP SD-WAN devices.
- Added support for LiveWire 1600 Core Light.

Bug Fixes

General

- Fixed an issue where the "server unavailable" message was not displaying on login page
- "Influx migration" message will no longer appear on login page after server reboot

Reporting

- Fixed an issue where favorite reports do not appear in some scenarios
- Fixed an issue where executive reports would not render
- Fixed an issue where user is not able to generate the share link from scheduled reports
- Fixed an issue where view options would not appear for shared reports
- Fixed an issue where the report parameters would appear invalid when selecting the IPSLA report for a device without any IPSLA tests
- Fixed an issue where user is getting empty space on top of the page, shared results report

Onboarding

- Fixed an issue where user is getting incorrect Model for SilverPeak devices

Dashboard

- Fixed an issue where search input was not cleared after closing the dashboard list

Alerting

- Fixed an issue where IPSLA alert would not automatically resolve

LiveNX Cloud Monitoring

- Fixed an issue to handle too many open files in LiveNX CM

Stories

- Fixed an issue where Device Inventory spinner would rotate infinitely when no data is present
- Changed the no data message to be more descriptive on the Site to Site analysis story

LiveAssist

- Fixed issue where LiveAssist would require a restart to use new proxy configurations

Customer Issues

- LS-3800 - Fixed an issue with executive reports that won't load.
- LS-3803 - Added Vendor and Models Support for Oracle Acme Packet Devices.
- LS-3801 - Added Oracle ENS/SBC device support
- LS-3584 - Fixed an issue where IPSLA alert doesn't auto-clear
