

## LiveNX 21.4.1 Release Notes

### Release Information

- Release Version: LiveNX v21.4.1
- Release Date - October 4, 2021
- Release Designation - MD (Maintenance Deployment)

### Build Information

APPLICATION VERSION	
Server Version :	21.4.1-20211001-857db29
Web Version :	21.4.1-20210930-fc000bed95+b26

### Resolved Customer Issues

- LS-2835: VRF name will now be resolved for both input/output fields

### Bug Fixes

#### Alerting

- LD-31046: Alert management table filters now work
- LD-31026: Alert data loads when a SDWAN path change alert with an empty class name exists
- LD-30871: Alerts instances will be removed from alert management table when deleted

#### Entity Pages

- LD-31023: Interface entity topology properly show it's parent site
- LD-31016: Device discovery modal allows use of SD-WAN and Seed Device options

#### Topology

- LD-30941: A fix was added to ensure topology renders for all browsers based on chromium v93+

#### Reporting

- LD-31020: Dynamic reports support "application group" field for NetFlow v9
- LD-30852: Dynamic reports
- LD-30112: VRF input/output is correctly resolved for dynamic reports

**Stories**

- LD-30882: Plugged possible memory leak on IPSLA story page

**Settings**

- LD-30979: Default data store settings can be modified when a node is down

**LiveNA**

- LD-30912: A fix was added to ensure LiveNX servers with custom applications that contain URIs but no URLs can connect to LiveNA
