

# Omnipeek 23.3.0

## WHAT'S NEW

### What's New in Omnipeek 23.3.0

- Improved performance and stability by replacing the application identification library
- Changed the reported model numbers for all appliances in the LiveWire UI and the SNMP MIB for better consistency
- Added notification and enforcement that the .npkt format is required for compression
- Removed "Productivity" and "Risk" metrics from all application analysis
- Upgraded LiveWire to work with OpenSSL 3
- Added packet reconstruction for SMB3 read and write requests
- Disabled autodiscovery by default to increase security -- users must now opt in
- Added new ACL policies for creating and deleting forensic searches
